When will I see the results?

In good conditions when the soil is moist, grass will start to appear from 7-10 days. In less favourable conditions allow 10-14 days.

When do I use it?

Apply March to early October.

How much will I need?

This pack will create a new lawn of 14m² (2m x 7m). To determine the size of your lawn multiply the length by the width in metres. This will give you the size of the area you wish to sow. As a guide one large stride is approximately 1 metre.

Our recommendation

For best results we recommend adding essential nutrients to the soil with EverGreen® Lawn Start before sowing.

Create a new lawn or fill in a bare patch

Step 1 Preparation

- 1 Remove all weeds and stones.
- 2 Turn the soil over to a depth of 15-22cm (6-9in).
- 3 Level and firm by either treading or using a roller.

Step 2 Sowing

- 1 Shake box to re-mix seed.
- 2 You'll need a large handful per square metre (30g or 1oz/sq.yd). For a visual guide, apply to a measured area first.
- 3 Create a criss-cross pattern by sowing half the seed from left to right and the rest from top to bottom.
- 4 Gently rake in, then tread or roll seed into the soil.

Step 3 After sowing

- 1 Unless it rains, soak with a fine spray and keep soil moist for the next few weeks.
- 2 The grass can be trimmed when 5-8cm (2-3in).
- 3 Each time you mow, lower blade height a level until it's at 2.5cm (1in).
- 4 Do not cut more than 1/3 off the growth at any one time.

Over-seed an existing lawn

Prepare the lawn by mowing it short, raking out dead grass, moss and debris. Apply a lawn dressing such as EverGreen® Lawn Soil. In dry conditions, moisten the lawn. Put down a small handful of seed for each square metre (25g). Lightly rake the seed into the lawn. Unless it rains, soak with a fine spray and keep soil moist for the next few weeks.
