**KEEP AWAY FROM FOOD, DRINK AND ANIMAL
FEEDING STUFFS.**

WASH HANDS AND EXPOSED SKIN before
meals and after use.

**HARMFUL TO AQUATIC ORGANISMS, MAY
CAUSE LONG TERM ADVERSE EFFECTS IN THE
AQUATIC ENVIRONMENT.**

ANTSTOP! SINGLES

[Authorisation number]

ANTSTOP! Singles contain Spinosad, an
active ingredient derived from natural soil
bacterium.

These easy to use sachets contain a
pre-measured dose of ANTSTOP! granules,
that will destroy an entire nest with one
application. These dust-free granules have
been formulated with an irresistible sugar
based carrier that actually attracts the ants.

ANTSTOP! Singles can be used in two ways.

Contact: Mix with water and pour directly on
the ants/nest, or

Ingestion: Sprinkling dry, over nests or runs
so the ants feed on the granules.

This advanced formula is not designed to kill
ants instantly, so they take the ANTSTOP!
back to the nest and the entire colony is
destroyed, ensuring 100% efficacy.

DIRECTIONS FOR USE:

Field of use	Application rate	Application time
Outdoor use:	Scatter granules over and around the nest (ca. 10g per nest) and the ant runs (up to 10g per running metre). Or: Drench application: 10g/0.5L water, per nest. Empty contents of sachet into 0.5L of water in a watering can. Stir the mixture thoroughly. Apply over nest and ant runs. After application, rinse the watering can with water and empty the rinsings on the treated area. Do not pour down drains.	At appearance If ants are still visible after 10 days, make a second application.
Indoor use:	Scatter along the ant runs, along cracks, crevices and hard surfaces (up to 10g per running metre). Do not use on carpets or soft furnishings.	

Granular formulation containing 2g/kg Spinosad
