## Sequestrene Plant Tonic

Iron deficiency results in pale yellow leaves, poor growth and flowering, and is the main reason why rhododendrons, heathers and other 'lime haters' cannot be grown well on chalky or alkaline soils. Murphy Sequestrene Plant Tonic supplies the necessary iron in a form plants can use to correct the deficiency.

**HOW TO USE** Can be used at any time but preferably in early Spring. Use a watering can.

Mix Murphy Sequestrene Plant Tonic with a little water, stir well, then add water to make up the full measured volume required. Apply evenly to the soil surface.

**RATES OF USE** These rates are intended as a guide and may be varied according to degree of yellowing, age and size of the plants. One application lasts all season.

PLANTS TREATED	RATE OF USE
Rhododendrons, Azaleas, Camellias Magnolias & other lime hating shrubs	1 to 2 sachets in 4.5 litres (1 gallon) of water per plant
Roses, Hydrangeas, Currants, Gooseberries & other shrubs	1 sachet in 4.5 litres (1 gallon) of water per plant
Raspberries, Strawberries & Herbaceous perennials covered by branch or leaf spread	1 to 3 sachets in 4.5 litres (1 gallon) of water per square metre of ground
Pot Plants Apply as when watering normally	1 sachet in 3.5 litres (6 pints) of water
Heathers & Alpines	1 sachet in 1.5 litres (3 pints) of water per 4 plants
