

LAWN CARE

SELECTING THE RIGHT SPREADER SETTING

The secret to a great looking lawn is in the application. If applied correctly our products will create an amazing, lush, green, weed and moss free lawn. However if applied incorrectly damage to the lawn will occur. Evergreen Garden Care has a wide range of spreaders to suit all lawn sizes.

Always read the instructions, on both the product and the spreader, and make sure you are using the correct setting.

1. Select the spreader and make sure it is suitable for your size of lawn

2. Select the product to use taking care to read the instructions

3. You now have the spreader setting and the number of passes you must apply on your lawn

SETTING

PASSES

		SMALL LAWN	MEDIUM LAWN	LARGE LAWN	SMALL LAWN	MEDIUM LAWN
	FOR 35g/m ²	3	6	27	5.25	4

		1	1	1	1	1
	FOR 150g/m ²	5	18	31	9	8
		8	2	2	4	1

Why are the settings different?

Each spreader model applies product at different rates. By using the correct setting for your spreader/product combination, you can be sure of the correct application.

How to achieve even application

We recommend applying the product on the perimeter and then in tramlines, up and down the lawn, whatever its shape.

What are passes?

'PASSES' refers to the number of times the product is applied to your entire lawn using a spreader (similar to the number of coats of paint you apply when decorating). By covering the lawn in different directions you avoid untreated gaps between tramlines. For example: for '2 passes' you cover the entire lawn 2 times to ensure the right amount of product is applied. On the diagram the first pass is white & the second yellow.

To achieve a great looking lawn follow these steps to keep the lawn in tip top condition.

1. FEEDING

Start to feed your lawn in spring and through to the autumn.

2. WEEDS & MOSS

Even with the best care and maintenance lawns may get problems with moss and weeds. Apply the right product to remove the problem avoiding heavy infestation at a later date.

3. SCARIFY

By raking your lawn you will remove dead grass, weeds moss and leaf litter which has built up over time, allowing more space for grass to grow and thicken.

4. AERATING

By spiking a lawn with a fork this will help relieve compaction and is good for a poorly drained lawn.

5. MOWING

Mow once a week to keep the weeds down and encourage the lawn to grow more thickly.

6. DRESSING

Apply a lawn dressing to improve the structure of your lawn, developing stronger roots and evening out any lumps and bumps.

Miracle-Gro® EverGreen® Complete 4 in 1 contains MCPA, mecoprop-P and iron sulphate. Miracle-Gro® EverGreen® Mosskill and Miracle-Gro® EverGreen® Autumn Lawn Care contain iron sulphate.

Keep children and pets away from treated areas until granules have been watered in and the area has dried

Lawns need love and

Use plant protection products safely. Always read the label and product information before use. For more inspiration and advice please visit www.lovethegarden.com
