

## Osmocote® The Original Controlled Release Plant Food™

Osmocote® Garden Beds Controlled Release Fertiliser releases vital nutrients that your plants need, when they need it the most. Osmocote® slowly supplies your garden beds with essential nutrition to promote vigorous root growth, lush foliage and beautiful blooms and fruit.

Osmocote® is particularly beneficial in the first years after transplanting when trees and shrubs are vulnerable until they become established.

Osmocote® provides a substantial increase in nutrient uptake compared to regular fertilisers and will not burn plants when used as directed.

## Directions for Use

**At Planting:** Mix Osmocote® Garden Beds into the backfill soil. Fill around the roots in the planting hole with the enriched soil and water thoroughly.

**Reapply Osmocote® in 4 months** according to the maintenance rates.

**Established Plants:** Sprinkle the recommended rate of Osmocote® around the plant's dripline. Lightly scratch into soil or cover with topsoil or mulch.

**When to Apply:** Suitable for application all year round. For best results apply in spring when new growth appears and late summer.

## Application Rates

Ideal for	Planting	Maintenance
Annual garden beds, flowers, veg, bulbs	6 TBL per m <sup>2</sup> or 1/2 TBL per plant	4 TBL per m <sup>2</sup> or 1/2 TBL per plant
