

Stronger, Healthier Plant Growth

Levington® is the premium brand of compost as used by many professional gardeners and growers. Through a wealth of knowledge gained over 40 years of research, we have developed a unique combination of ingredients for Levington®. This compost is enriched with all of the essential plant nutrients, to guarantee you stronger, healthier plants

Levington® Seed & Cutting Compost

contains a unique blend of nutrients to provide the ideal environment for sensitive young plants:

NITROGEN (N)	For green leaves and healthy shoots
PHOSPHATE (P)	For strong root development
POTASSIUM (K)	For fruit and flowers
TRACE ELEMENTS	Essential for all round plant health and disease resistance
WATER RETAINING AGENT	Levington® has a patented wetting agent that enables the compost to soak up and retain higher levels of water without getting water logged.
HIGH PHOSPHATE FORMULA	Optimum root growth.

How to Use:

Sowing Seeds

Fill a clean seed tray with Levington Seed & Cutting Compost, level off with your hand or ruler, firm lightly and water using a fine rose.

- Sow seeds thinly and evenly. Cover the seeds when necessary with their own depth of compost, firming lightly.
- For smaller seeds such as Petunia or Lobelia there is no need to cover with the Levington Compost.

To retain water, cover the seed tray or container with either glass or polythene. Make sure the tray is kept out of direct sunlight.

When the seedlings are ready to be transplanted into individual pots, take care to handle them by the leaves and not the stems or roots.

M	20L	17x		or 12		17 CELLULAR TRAYS, 12 STANDARD 12" TRAYS
---	-----	-----	--	-------	--	---

Environmental Information

At Scotts we are justly proud of our environmental record and our concern for the environment, both at our production facilities and in your garden. With this in mind we continue to develop outstanding, consistent growing media using a range of peat based, reduced peat and peat free ingredients, many of which make use of otherwise waste material.

Over the last decade we have significantly reduced the proportion of peat we use in our composts and will continue to do so. We do not harvest any peat from SSSI or SAC sites and are actively involved in helping the management and restoration of the peat land areas that we harvest from.

As we continue to work towards reduced peat formulations we are continually introducing new materials into our products. This may mean that you notice a difference in the appearance of your compost from year to year. Rest assured, any changes to our formulas are rigorously tested so we can guarantee the product you are using is as good as, if not better, than before.

Cuttings

Take the cutting in the appropriate way according to the type of plant.

Fill the container with Levington Seed & Cutting Compost. Place the cutting in a hole in the compost. Firm lightly, water the compost, cover to retain moisture and keep warm.

Caring for Your Plants

WATERING: Compost should be kept moist at all times and not allowed to dry out. Plants should not be left to stand in water for long periods of time, as it will encourage root rot.

GROWING ON: After 4 to 6 weeks plants should be potted up into Levington® Container and Hanging Basket Compost or one of our specialist mixes for plants such as Citrus, Cactus or Bonsai. After that time, maintain strong growth by feeding with **Miracle-Gro Plant Food** regularly.

We recommend you always wear gloves when gardening.

Premium Guarantee

If you are not completely satisfied with the performance of this product we offer you your money back.
