

## Special Blend of Organic Nutrients.

Levington® Organic Blend is a premium range of soils, soil improvers and growing media as used by many traditional gardeners. Through a wealth of knowledge gained over 40 years of research, we have developed a unique combination of ingredients for Levington®. Our Organic Blend range is made from specially selected natural materials to provide a healthy, organic environment for your plants.

## Levington Organic Blend Top Soil Made with Sterilised Loam - Enriches Poor Soil

Levington Organic Blend Top Soil is a rich, fertile loam-based soil with a high content of organic matter. It is ideal for making raised beds where existing soil is poor or for replacing soil that is tired or unsuitable for the re-planting of related plants. It can be used as a component of soil/loam based type composts.

It is ideal for:

- Creating new beds and borders
- Replacing old soil
- Levelling lawns
- Making compost

We recommend you always wear gloves when gardening.

## Where to Use:

### Making Composts

Due to its high organic matter content, this top quality soil is ideal for mixing with base dressings to make a loam-based compost. To enrich it add Miracle-Gro Slow Release Plant Food granules at the rate of 25g per 10 litres of soil. For alpines and other plants that need increased drainage, add 1 part coarse grit or washed sharp sand to 3 parts of Levington® Organic Blend Top Soil.

### Levelling Lawns

Use Levington Organic Blend Top Soil to produce a clean, level surface before sowing grass seed or laying turf or for filling in hollows in established lawns.

## Environmental Information

At Scotts we are justly proud of our environmental record and our concern for the environment, both at our production facilities and in your garden. With this in mind we continue to develop outstanding, consistent growing media using a range of peat based, reduced peat and peat free ingredients, many of which make use of otherwise waste material.

Over the last decade we have significantly reduced the proportion of peat we use in our composts and will continue to do so. We do not harvest any peat from SSSI or SAC sites and are actively involved in helping the management and restoration of the peat land areas that we harvest from.

As we continue to work towards reduced peat formulations we are continually introducing new materials into our products. This may mean that you notice a difference in the appearance of your compost from year to year. Rest assured, any changes to our formulas are rigorously tested so we can guarantee the product you are using is as good as, if not better, than before.

## Premium Guarantee

If you are not completely satisfied with the performance of this product we offer you your money back.

### Beds and Borders

Use Levington Organic Blend Top Soil straight from the bag to build up beds and borders. Dig in this fertile blend to enrich your tired existing soil with its high organic matter content.

No lime has been added to Levington Organic Blend Top Soil and it is suitable for improving the soil around Rhododendrons, Azaleas, Heathers and other ericaceous plants.

### Pots and Patio Containers

In windy positions, a loam-based compost will provide the weight needed to help keep patio pots and containers upright.

Add Miracle-Gro Controlled Release Plant Food granules at the rate of 25g per 10 litres of soil before planting. Keep watered in the normal way.

### Replacing Sick Soil

Soil in greenhouses that has developed a build-up of pests and diseases or soil that has grown roses or strawberries for a number of years may need replacing if new plants are to establish. Use Levington Organic Blend Top Soil to introduce a fresh, fertile soil in which plants can thrive.
