WHERE TO USE?

Use for all young plants

Our seed and cutting compost is ideal for all young plants. It has been specially developed, with a high phosphate formula and 14 vital minerals for optimum root growth. Together with a healthy moisture balance, it is a great start for your plants.

We strongly recommend using Levington Ericaceous compost for acid loving plants like Azaleas, Rhododendrons or Heathers.

Seed Sowing

Fill a clean seed tray with the seed and cutting compost, level off with your hand or a ruler. Firm lightly and water using a fine rose.

Sow the seeds thinly and evenly. Cover the seeds when necessary with their own depth of compost, firming lightly. For smaller seeds such as Petunia or Lobelia there is no need to cover with compost.

To retain water, cover the seed tray or container with either glass or polythene. Make sure the tray is kept out of direct sunlight.

Follow the recommendations on the seed packet for temperatures, covering the seed and for shading. When the seedlings are ready to be transplanted into individual pots, take care to handle them by the leaves and not the stems or roots.

Rooting Cuttings

Take the cutting in the appropriate way according to the plant. Fill the container with Seed and Cutting compost. Place the cutting in a hole in the compost. Firm lightly, water the compost, cover to retain moisture and keep warm.

Do not cover hairy leaved plants like geraniums and saintpaulia. Keep in a warm, well-lit place, out of direct sunlight. Water again only when the compost dries out.

Growing on

After 4-6 weeks plants should be potted up using Levington John Innes No.2 After that time maintain strong growth by feeding with Miracle-Gro Plant food.

HOW TO USE?

Instructions for use

Use straight from the bag, it's as easy as that. When filling or potting, firm lightly. Keep the compost moist and do not let it dry out. Do not leave plants standing in water.

Storage instructions

- Keep the bag closed when in storage to prevent drying out.
- Storage from one year to another may affect performance.
- Keep away from pesticides.
- Occasionally a white mould appears on the compost. This is not harmful to your plants and should disappear naturally.

OUR STORY...

Established in 1967, Levington has been providing expertise, research and innovation into compost for over 50 years. When it comes to compost, Levington has been the gardener's choice for decades.

At our officially recognised research station in Levington, Suffolk, we are constantly innovating and testing for the best combinations of ingredients in compost to ensure your plants are strong and healthy.

WHAT IS IT?

Seed and cutting compost

Levington Seed and Cutting Compost contains a special **coir** and woodfibre combination. Coir for a finer texture and woodfibre that maintains a healthy moisture balance that aids germination.

NITROGEN (N)	For greener leaves and healthy shoots
PHOSPHATE (P)	For strong root development
POTASSIUM (K)	For fruit and flowers
TRACE ELEMENTS	Essential for all round plant health and disease resistance

Patented wetting agent which enables compost to soak and absorb higher levels of water without getting water logged.

SUSTAINABILITY

Responsible sourcing

We are actively working on improving the responsible sourcing profile of our compost mixes year on year. Levington compost contains forest by-products, carefully processed to help you grow plants that improve your environment and make the world a more beautiful place.

How much Peat?

Health and safety advice

• Use in a well ventilated place and avoid breathing in dust. • Use in a well ventilated place and avoid the second second

- Wash hands after use.
- Store in a cool place, away from sun.
- Open bag carefully and reseal after use.
