WHERE TO USE?

Use for all types of young plants

Our John Innes No1. compost is ideal for all young plants. It has been specially developed, with a unique combination of 14 vital minerals for maintaining plants growth and health. With its traditional mix of loam, peat and grit, it is a great start for

We strongly recommend using Levington Ericaceous compost for acid loving plants like Azaleas, Rhododendrons or Heathers.

Pricking out seedlings

Loosely fill the tray or pot with compost and level. Use a dibber or small fork to loosen the compost beneath the seedling. Holding the seedling by a seed leaf, ease the seedling out of its compost keeping as much of the original compost sticking to the roots as possible.

Make a hole in the new compost and place the roots of the seedling in the hole. Gently firm the compost around the plant, spacing out the seedlings evenly. Water gently with a fine rose to settle the compost around the roots. Keep in a warm, shaded spot protected from frost.

Potting-on rooting cuttings

Add a layer of compost to the bottom of the new pots or tray cells. Position the rooted cutting into the pot and top uo with fresh compost around the roots. Water gently and keep in a warm, shaded spot protected from frost.

Growing on

After 6 weeks water with Miracle-Gro Water soluble plant food, or re-pot into Levington John Innes No.2 compost.

JOHN INNES NO.2

Perfect for re-potting.

JOHN INNES NO.3

Perfect for final re-potting of

JOHN INNES Ericaceous

Perfect for acid loving plants like Azaleas, Heathers & Rhododendrons.

HOW TO USE?

Instructions for use

Use straight from the bag, it's as easy as that. When filling or potting, firm lightly. Keep the compost moist and do not let it dry out. Do not leave plants standing in water. Storing from one year to another may result in the fertiliser ratios becoming unbalanced.

Storage instructions

- · Keep the bag closed when in storage to prevent drying out. Storage from one year to another may affect performance.
 Keep away from pesticides.
- Occasionally a white mould appears on the compost. This is not harmful to your plants and should disappear naturally.

Health and safety advice

- \bullet Use in a well ventilated place and avoid breathing in dust.
- Always wear gloves when gardeningWash hands after use.
- Store in a cool place, away from sun.Open bag carefully and reseal after use.

OUR STORY...

Established in 1967, Levington has been providing expertise, research and innovation into compost for over 50 years. When it comes to compost, Levington has been the gardener's choice for decades.

At our officially recognised research station in Levington, Suffolk, we are constantly innovating and testing for the best combinations of ingredients in compost to ensure your plants are strong and healthy.

WHAT IS IT?

What is John Innes?

John Innes composts were developed in the 1930's. They are based on a traditional mixture of loam, sand or grit and peat. With a balance of nutrients this formula will ensure strong, healthy plants.

John Innes No1. Compost

Levington John Innes No.1 compost is a special, **traditional mix** with loam and grit that secures an open texture for the roots to develop and excess moisture to **drain** freely.

TRACE ELEMENTS

Optimum **drainage** system prevents excess moisture.

Essential for all round plant health and disease resistance

For greener leaves and healthy shoots **NITROGEN (N)** PHOSPHATE (P) For strong root development POTASSIUM (K) For fruit and flowers

Levington John Innes No.1 compost is specially balanced with nutrients and provides 6 weeks of plant feed, to give your plants a great start.

SUSTAINABILITY

Responsible sourcing

We are actively working on improving the responsible sourcing profile of our compost mixes year on year. Levington compost contains forest by-products, carefully processed to help you grow plants that improve your environment and make the world a more beautiful place.

How much Peat?

100%

We are actively involved in the management and restoration of the peatlands we harvest from.
