view assembly videos:

## How to use

1. Cover 1m per second. This is your walking speed whilst applying the product.
2. Select the right setting. Visit [lovethegarden.com/spreadersettings](http://lovethegarden.com/spreadersettings) for a full list of products and their settings.
3. Fill the spreader. Place on a level surface (not the lawn) and sweep up any product that spills to reduce the risk of staining patios, decking etc.
4. Begin spreading. Hold at a comfortable height. Next pull and hold the trigger and begin walking whilst turning the handle.  
**Do not use product that contains weed or moss control around ornamental plants or borders to avoid damage.**

## How to apply

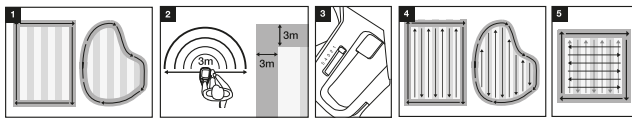

Visit our website for a full list of products and the number passes required. Always read the product label before use.

### Begin with your borders

1. Apply a header strip around the edge of the lawn beside your borders.
2. Leave a 3m gap from your border, as this is the spreading width.
3. Always release trigger when changing direction to stop release of product and avoid over application and lawn scorch.

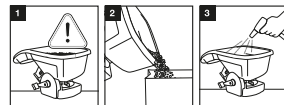

### Inside portion of your lawn

4. Walk back and forth in the longest direction when reaching the header strip.
5. If two or more passes over the lawn are required, cover the lawn in a criss-cross pattern.

## Maintenance

1. Never leave product in spreader as it may dampen and clog up.
2. Pour leftover product back into the original packaging, seal tightly and store in a dry place.
3. After each use, wash and dry the spreader thoroughly (prevent this waste water from entering the drainage system).
4. Store in a dry place.
