

Nourish & Protect for Flowers, Fruit and Veg is a dual-benefit, pesticide-free formula combining the feeding action of Miracle-Gro Plant Food for healthy plants with natural lava rocks as a physical protective barrier against slugs and snails. Placed around each plant, it feeds the plant and prevents slugs and snails from eating the fruits and foliage.

WHEN TO USE:

Use from **March to October**. Slugs and snails are most active during warm wet weather in spring and autumn. We recommend using when planting out young plants, protecting young shoots and summer fruits such as strawberries. A second application can be made after 5 weeks if needed.

HOW TO USE:

New Plants: Apply barrier around each plant when planting vegetables, fruits or ornamental plants.

Existing Plants: For perennials and bulbs/tubers, apply a circular barrier when the shoots appear. For existing plants, check for presence of slugs under leaves, bark or stones before applying the barrier.

1. Remove weeds from around plants and check for presence of slugs under leaves, bark or stones before applying the barrier.

2. Pour a circle barrier of 2 cm width and 0.5-1 cm height, around each plant.

3. Make sure the circle is closed to form a barrier.

SUSTAINABILITY

This bag is made from 30% recycled plastic!

To find out more about how Miracle-Gro are helping with sustainability visit our website.

WHERE TO USE:

When to apply	Slug Sensitive Plants
When planting young plants	Vegetables: salads especially green salads, herbs like basil, parsley or dill, all cabbage plants, spinach, celery, courgette, pepper Flowering annuals: marigolds, petunias, zinnia Perennials, bulbs & tubers: delphinium, aster, dahlia, lupins, hosta.
